Knowledge Applied.

CognaWorks Inc. is a Canadian technology company that engineers intelligence platforms, autonomous control systems, digital infrastructure and human-centered software. Its programs share one engineering organization and one research practice, CognaWorks Labs.

FOUR FIELDS OF TECHNOLOGY

01	02	03	04
Intelligence & Decision Systems	**Autonomous & Environmental Systems**	**Infrastructure Engineering**	**Human-Centered Systems**
Platforms that turn large public and institutional records into connected, traceable intelligence for the people who make decisions.	Control software and environmental systems engineered to run on their own, where infrastructure and connectivity are limited.	The engineering of digital infrastructure: connectivity, computing and services, data and operations.	Software engineered around how people think, plan and work.

PRODUCTS AND PLATFORMS

ANCHOR	PUBLIC DATA INTELLIGENCE	A public-data intelligence platform that connects fragmented public records and traces every finding back to its source.
ReliefSense	OFFLINE ENVIRONMENTAL CONTROL	Environmental-control software that runs entirely offline, and a proposed growth chamber for fresh food where infrastructure is limited. In development. The control software is implemented; the growth chamber is a proposed design.
Drey	COGNITIVE & EXECUTIVE-FUNCTION TECHNOLOGY	Planning software that treats the day as a problem of cognitive workload: it builds the plan, supports getting started, and adapts when things change. Tested in beta through TestFlight. Coming to the App Store.
Hallstamp	WORKFORCE & CAREER TECHNOLOGY	An evidence-based career platform: every skill carries the proof behind it, every match can be traced, and nothing is invented. Available at hallstamp.com in English and French.
VOX	CRISIS COMMUNICATION & CONTROL	A crisis communication and control platform: from the first sensor reading to a clear spoken warning for every audience, in one system. In development.

HOW WE ENGINEER

Built to be depended on. Our work is for situations where someone relies on the result: an analyst, an operator in the field, a person planning a hard day.

A person decides. Our systems are designed to inform a decision or to carry one out. The decision itself stays with a person.

The evidence stays with the work. We keep the plan, the decisions and the test evidence with the systems we build, so that our engineering can be examined.

CognaWorks Labs. The company's research practice: software verification, AI-assisted engineering under independent review, and the governance of engineering evidence and standards.

THE COMPANY ON RECORD

LEGAL NAME	CognaWorks Inc.
INCORPORATED	30 March 2026, federally, under the Canada Business Corporations Act
CORPORATION NO.	1781462-3
HEADQUARTERS	Ottawa, Ontario, Canada
DIRECTORS	Ahmet Mikail Bayindir, Muhammet Furkan Yalcin
RECOGNITION	In April 2026 ANCHOR was named one of three standout entries among 72 teams at a Government of Alberta hackathon on public-spending data.
